Contents

Spring TestContext

Test Slices

Recipes!

Method Validation, Method
Security, Caching, Aspects,
Kafka

Spring TestContext

- ▶ Starts an ApplicationContext for each test class
- ▶ Contexts are cached
- ▶ To reuse a context:
 - ▶ @SpringBootTest, @WebMvcTest, @DataJpaTest, @MockBean, @SpyBean, @ContextConfiguration, @Import, @ImportAutoConfiguration, @TestPropertySource, @ActiveProfiles, @EnableXXX...

Test Slices

- ▶ @WebMvcTest, @DataJpaTest, @DataJdbcTest, @JsonTest, @RestClientTest...
- ▶ Control
 - ▶ Component scan
 - ▶ AutoConfiguration

Rolling your own

- ▶ @SpringBootTest can be costly
- ▶ Start just what you need
- ▶ More flexibility
- ▶ Less coupling with unrelated concerns

Recipe Template

1. Import relevant parts of the application
 - ▶ `@SpringBootTest(classes = XXX.class)`
 - ▶ `@Configuration`
 - ▶ `@ComponentScan` (gray box)
2. Import relevant AutoConfigurations
 - ▶ `@ImportAutoConfiguration`

Diet Recipes

Method Security

- ▶ @PreAuthorize, @PostAuthorize, @PreFilter, @PostFilter, @Secured, @RolesAllowed
- ▶ Ingredients
 - ▶ @SpringBootTest
 - ▶ @Configuration
 - ▶ @ComponentScan

Method Validation

- ▶ JSR 303
- ▶ @Valid, @NotNull, @Pattern, @NotEmpty, @Size, @Email ...

Ingredients

- ▶ @SpringBootTest(classes = XXX.class)
- ▶ @ImportAutoConfiguration(ValidationAutoConfiguration.class)
- ▶ Validation helper

Aspects

- ▶ @Before, @After, @Around, @AfterThrowing...
- ▶ AspectJ language
- ▶ Ingredients
 - ▶ SpringBootTest(classes = XXX)
 - ▶ @ImportAutoConfiguration(AopAutoConfiguration.class)
 - ▶ Helper class with annotations
 - ▶ @MockitoBean

Caching

- ▶ @Cacheable
- ▶ Ingredients
 - ▶ @SpringBootTest
 - ▶ @Configuration
 - ▶ @ImportAutoConfiguration(CacheAutoConfiguration.class)
 - ▶ Mock!

Kafka!

- ▶ Ingredients

- ▶ `@SpringBootTest(classes = MyKafkaConsumer.class)`
- ▶ `@ImportAutoConfiguration(KafkaAutoConfiguration.class)`
- ▶ `@EmbeddedKafka`

Other Considerations

- ▶ Have at least one full `@SpringBootTest`
- ▶ Code smell: `@EnableXXX` directly on a test
- ▶ Use SRP-y configuration classes

Conclusion

- ▶ Smaller tests are faster
- ▶ Smaller tests are more flexible
- ▶ Smaller tests are easier to troubleshoot
